

SN54HCT658, SN54HCT659, SN74HCT658, SN74HCT659 OCTAL BUS TRANSCEIVERS WITH PARITY

D2839, MARCH 1984 - REVISED SEPTEMBER 1987

- Inputs are TTL-Voltage Compatible
- Bus Transceivers with Inverting Outputs ('HCT658) or True Outputs ('HCT659)
- Generates a Parity Bit for A Bus and B Bus
- Easily Cascadable
- Internal Active Pull-Ups and Pull-Downs
- High-Current 3-State Outputs Can Drive Up to 15 LSTTL Loads
- Package Options Include Plastic "Small Outline" Packages, Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs
- Dependable Texas Instruments Quality and Reliability

HCMOS Devices

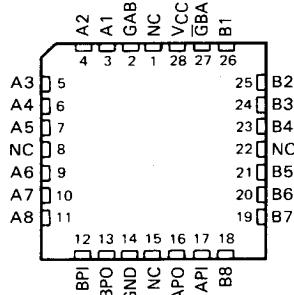

description

These octal bus transceivers are designed for asynchronous, bidirectional communication between data buses. The devices transmit data from the A Bus to the B Bus or from the B Bus to the A Bus, depending on the levels at the direction control inputs, GAB and GBA. These devices also generate parity outputs, APO and BPO, which reflect the number of high levels at the A Bus and B Bus, respectively, taking into account the parity inputs API and BPI.

The bidirectional I/O ports feature active circuits on the input stage that, when the output shared by that pin is disabled, will maintain the input in the last state taken by the output. This state will be maintained until changed by activity on the bus. The advantage of this arrangement is that when all outputs on the bus are disabled, the inputs will be prevented from floating, resulting in minimum power dissipation and minimum susceptibility to noise. This eliminates any need for external pull-up or pull-down resistors. The parity inputs API and BPI have similar circuits. For further information, see Typical Application Data in 'HC658 series data sheet.'

The SN54HCT658 and SN54HCT659 are characterized for operation over the full military temperature range of -55°C to 125°C . The SN74HCT658 and SN74HCT659 are characterized for operation from -40°C to 85°C .

HCMOS Devices

Pin numbers shown are for DW, JT, and NT packages.

absolute maximum ratings over operating free-air temperature range[†]

Supply voltage, V _{CC}	-0.5 V to 7 V
Input clamp current, I _{IK} (V _I < 0 or V _I > V _{CC})	±20 mA
Output clamp current, I _{OK} (V _O < 0 or V _O > V _{CC})	±20 mA
Continuous output current, I _O (V _O = 0 to V _{CC})	±35 mA
Continuous current through V _{CC} or GND pins	±70 mA
Lead temperature 1.6 mm (1/16 in) from case for 60 s: FK or JT package	300°C
Lead temperature 1.6 mm (1/16 in) from case for 10 s: DW or NT package	260°C
Storage temperature range	-65°C to 150°C

[†]Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
