

Stereo/Bridge AF Amplifier 2 x 15 W/30 W

TDA 4935

Bipolar IC

Features

- Universal application as stereo amplifier or mono amplifier in bridge configuration
- Wide supply voltage range
- Minimum of external components

Type	Ordering Code	Package
TDA 4935	Q67000-A2538	P-SIP-9

The TDA 4935 can be applied as a class B stereo amplifier or mono amplifier in bridge configuration for AF signals. In addition, the component is provided with a protective circuitry against overtemperature and overload.

Circuit Description

The IC contains 2 complete amplifiers and can be used for a wide variety of applications with a minimum of external circuitry.

The TDA 4935 can be applied as stereo amplifier or amplifier in bridge configuration for operating voltages ranging between 8 V and 26 V.

The pre-stages are differential amplifiers with strong negative feedback. Internal frequency compensation in the driver amplifier limits the gain-bandwidth product to 4.5 MHz.

The power output stages are comprised of quasi PNP transistors (small saturation voltage).

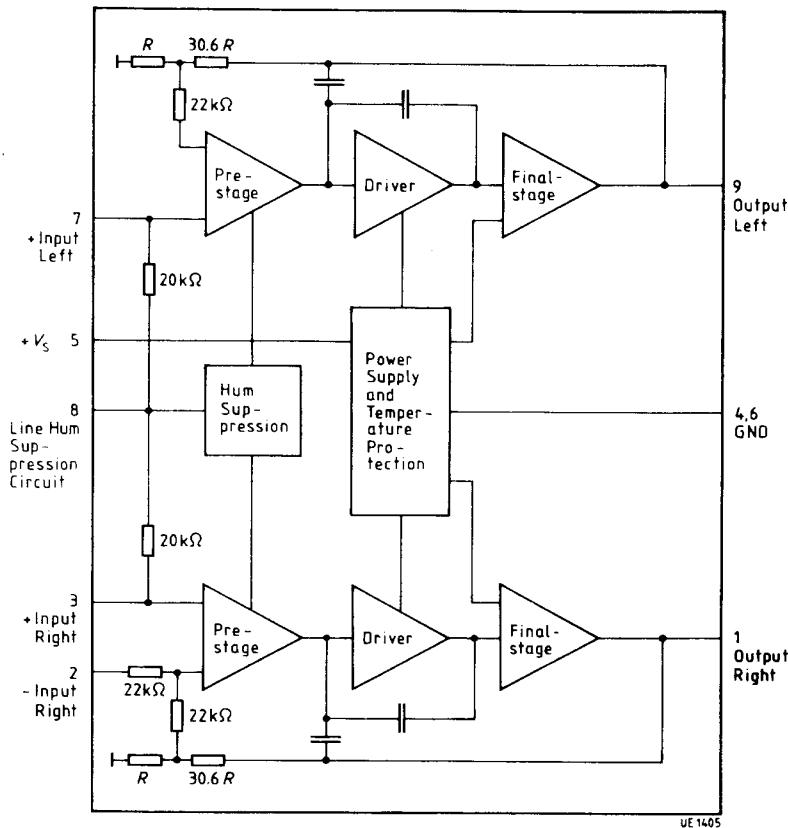

To avoid overheating, a temperature fuse affecting both amplifiers prevents current supply to the power output stages during inadmissibly high chip temperatures.

As a special economic feature, the negative feedback resistances for $G_v = 30$ dB and the input voltage reference divider have been integrated.

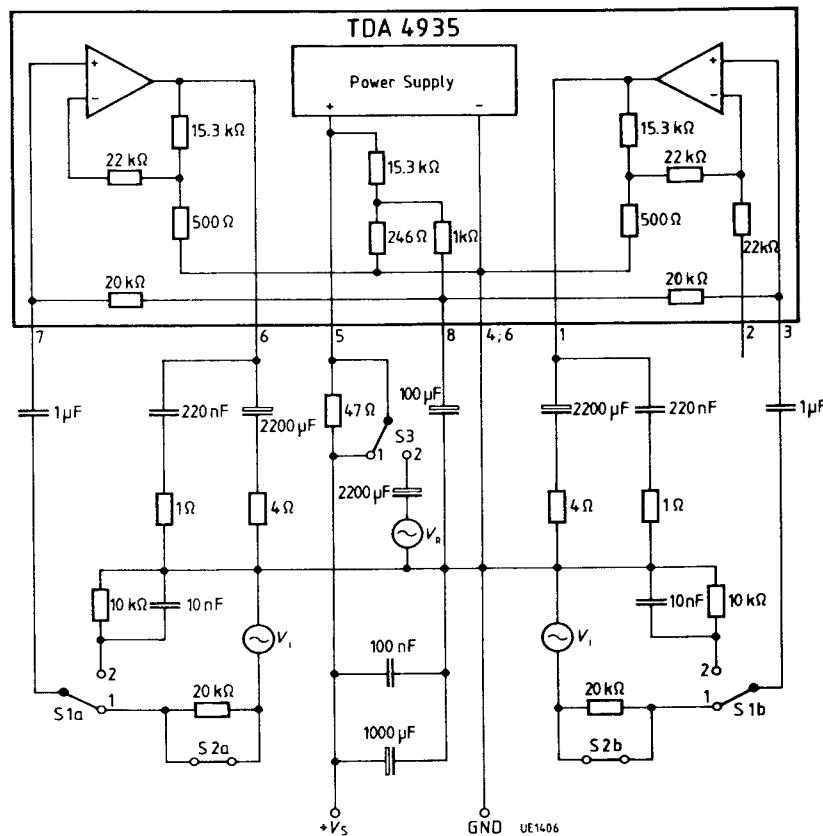

Pin Functions

Pin No.	Function
1	Output right channel
2	Inverting input right channel (more than 22 k Ω)
3	Non-inverting input right channel
4	GND
5	+ Vs
6	GND
7	Non-inverting input left channel
8	Line hum suppression right and left channel
9	Output left channel
