8-input priority encoder

HEF4532B MSI

DESCRIPTION

The HEF4532B is an 8-input priority encoder with eight active HIGH priority inputs (I_0 to I_7), three active HIGH outputs (O_0 to O_2), an active HIGH enable input (E_{in}), an active HIGH enable output (E_{out}) and an active HIGH group select output (GS).

Data is accepted on inputs I_0 to I_7 . The binary code

corresponding to the highest priority input (I_0 to I_7) which is HIGH, is generated on O_0 to O_2 if E_{in} is HIGH. Input I_7 is assigned the highest priority.

GS is HIGH when one or more priority inputs and E_{in} are HIGH. E_{out} is HIGH when I_0 to I_7 are LOW and E_{in} is HIGH. E_{in} , when LOW, forces all outputs (O_0 to O_2 , GS, E_{out}) LOW.
