6-SECTION MULTIFUNCTION
(INVERT, NOR, FLIP-FLOP) CIRCUITS

D2880, MARCH 1985—REVISED SEPTEMBER 1987

- Contains D-type Flip-Flops with Preset and Clear, NOR and Inverter Gates
- Package Options Include Plastic "Small Outline" Packages, Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs
- Dependable Texas Instruments Quality and Reliability

description

The SN54HC7076 and SN74HC7076 are each comprised of the following sections:

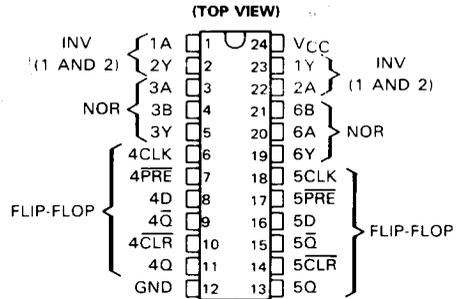

- Two inverters
- Two 2-input NOR gates
- Two D-type flip-flops

They perform the Boolean functions shown under the respective function table.

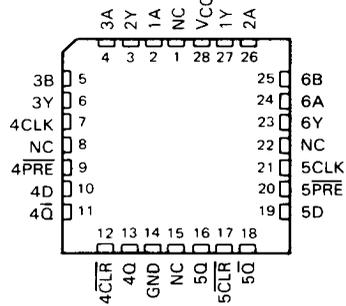

The D-type flip-flops are positive-edge-triggered and are functionally similar to the SN54HC74 and SN74HC74. A low level at the \overline{PRE} or \overline{CLR} inputs sets or resets the outputs regardless of the levels of the other inputs. When \overline{PRE} and \overline{CLR} are inactive (high), data at the D input meeting the setup time requirements are transferred to the outputs on the positive-going edge of the clock pulse. Clock triggering occurs at a voltage level and is not directly related to the rise time of the clock pulse. Following the hold time interval, data at the D input may be changed without affecting the levels at the outputs.

The SN54HC7076 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74HC7076 is characterized for operation from -40°C to 85°C .

| Storage temperature range | -65 °C to 150 °C |

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
