## NTE703A

### Linear Integrated Circuit

### RF-IF Amplifier

#### Description:

The NTE703A is an RF-IF amplifier constructed on a single silicon chip and intended for use as a limiting or non-limiting amplifier, harmonic mixer, or oscillator to 150MHz. The low internal feedback of the device insures a higher stability-limited gain than that available from conventional circuitry. Including the biasing network in the same package reduces the number of external components required, thereby increasing the reliability and versatility of the device.
